

BoardLight (Patent Pending) is the only purpose-built British Design and Manufactured double sided light that was solely created to enhance, emphasise and individualise all your property board advertising needs.

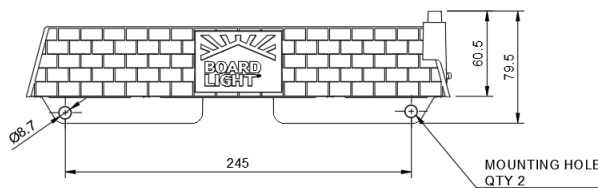

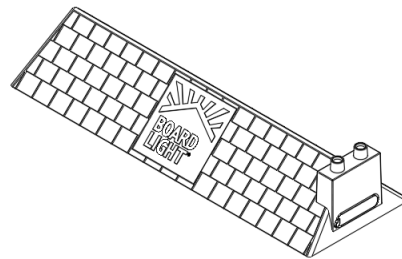

Designed for low light, or suburban and rural areas, giving enough illumination as to stand out against other non-illuminated boards, and to be able to discern the product and advertiser details.

Boardlight will turn on for a maximum of 4 hours per day, automatically turning off at 21:00 hours to eliminate nuisance or light pollution concerns.

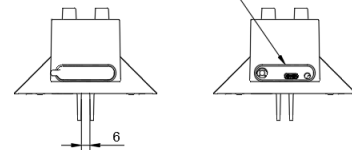

Battery life comes with a minimum 90-day usage with the rechargeable model using a normal USB "C" cable, giving a lifespan into double digit years. Multiple charging stations are also available upon request.

- Made from tough PC/ABS polymer, waterproof to IP44.
- Fully recyclable in line with WEEE, Boardlight is the green option.
- Easily fitted using 2 nylon bolts, either straddling the fixing post on a centre "T" style board, or to one side on a "flag" style board.
